Task: What type of fault is this?\nThe output of fault analysis tool is: Based on the provided COMTRADE data, a **single-phase-to-ground fault on Phase C** is the most likely fault type. Here's a detailed explanation supporting this conclusion:

Current Analysis:

- **Phase A:** Shows a moderate increase in peak current ([redacted] A to [redacted] A), with a post-trigger to pre-fault ratio of [redacted]. This increase is significant but not as dramatic

Task List

1. Find the fault type and explanation COMTRADE files. #E1 = find_fault_type[cfg_file_path=/app/[redacted]b055-4f84-8b4b-e80a0397ac6c/5[redacted]a690-47f43cf40803.bin, dat_file_path=/app/dr_analysis/.file[redacted]8b4b-e80a0397ac6c/e9074cbc-ef[redacted]599d9e9ddf1e.bin]
2. Use the LLM to extract and present fault type from the output of the pre[redacted] step. #E2 = LLM[Task: What type o[redacted] is this?\nThe output of fault analysis is: #E1]
